Step-3

The screenshot shows the Python 3.7.14 release page on the official Python website. The browser's address bar displays the URL `python.org/downloads/release/python-3714/`. The page features the Python logo and navigation links such as 'About', 'Downloads', 'Documentation', 'Community', 'Success Stories', 'News', and 'Events'. A 'Donate' button and a search bar are also visible. The main heading is 'Python 3.7.14', followed by the 'Release Date: Sept. 6, 2022'. A 'Note' section explains that this is a security bugfix release for the legacy 3.7 series. Below this, a section titled 'Security content in this release' lists three specific fixes: CVE-2020-10735, gh-87389, and gh-93065. The Windows taskbar at the bottom shows several open applications, including a file explorer and a terminal window.

Python 3.7.14

Release Date: Sept. 6, 2022

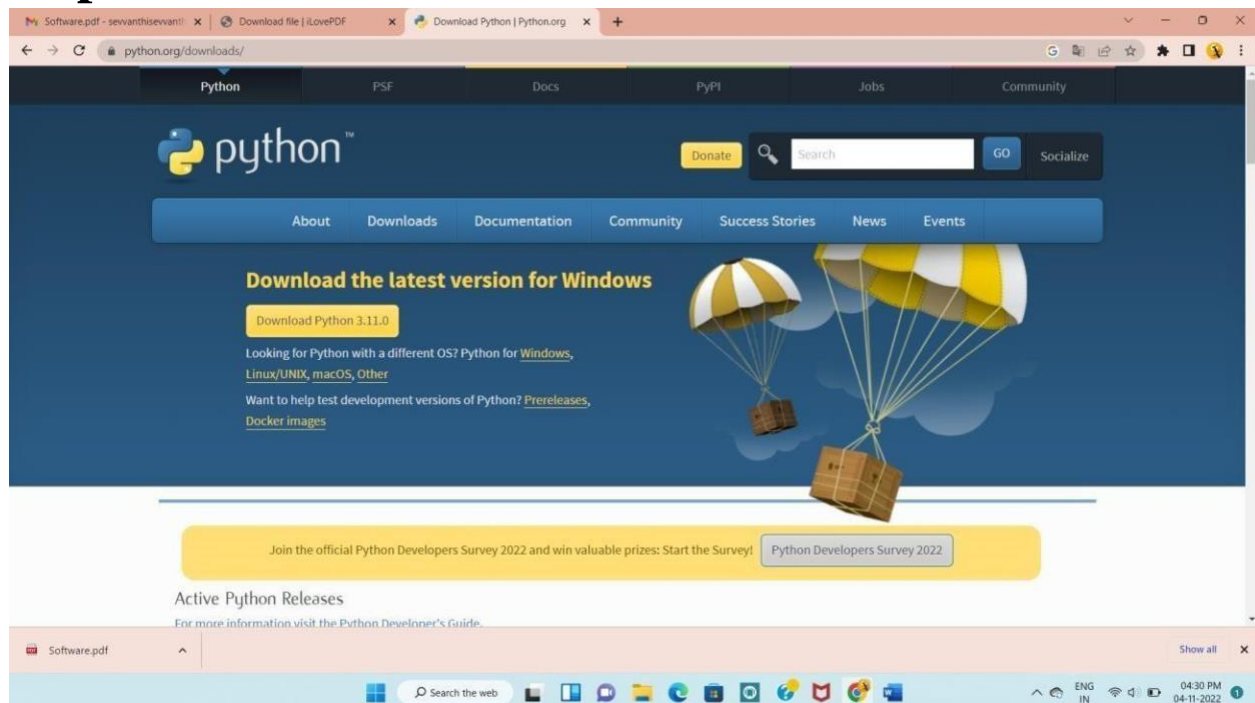

Note: The release you are looking at is **Python 3.7.14**, a **security bugfix release** for the legacy **3.7** series which is now in the **security fix** phase of its life cycle. See the [downloads page](#) for currently supported versions of Python and for the most recent source-only **security fix** release for 3.7. The final **bugfix** release with binary installers for 3.7 was 3.7.9.

Please see the [Full Changelog](#) link for more information about the contents of this release and see [What's New In Python 3.7](#) for more information about 3.7 features.

Security content in this release

- CVE-2020-10735: converting between int and str in bases other than 2 (binary), 4, 8 (octal), 16 (hexadecimal), or 32 such as base 10 (decimal) now raises a `ValueError` if the number of digits in string form is above a limit to avoid potential denial of service attacks due to the algorithmic complexity.
- gh-87389: http.server: Fix an open redirection vulnerability in the HTTP server when an URI path starts with `//`.
- gh-93065: Fix contextvars HAMT implementation to handle iteration over deep trees to avoid a potential crash of the interpreter.

Step-4

The screenshot shows the Python downloads page on the official Python website. The browser's address bar displays the URL `python.org/downloads/`. The page features the Python logo and navigation links such as 'About', 'Downloads', 'Documentation', 'Community', 'Success Stories', 'News', and 'Events'. A 'Donate' button and a search bar are also visible. The main heading is 'Download the latest version for Windows', followed by a 'Download Python 3.11.0' button. Below this, there are links for 'Looking for Python with a different OS?', 'Linux/UNIX, macOS, Other', 'Want to help test development versions of Python?', 'Prereleases', and 'Docker images'. The Windows taskbar at the bottom shows several open applications, including a file explorer and a terminal window.
